Competent authority responsible for the supervision of the Product Manufacturer in relation to this document: not applicable (the Product Manufacturer is not regulated in the EEA)

Date of publication: 22 February 2018

You are about to purchase a product that is not simple and may be difficult to understand.

What is this product?

Type

This product is an exchange-traded option contract, governed by the laws of Canada. This product is listed and traded on the Bourse de Montréal's trading platform via its central limit order book (CLOB). Once a transaction is executed, it is novated to the Canadian Derivatives Clearing Corporation ("**CDCC**"), which acts as the issuer, clearinghouse and guarantor of all exchange-traded derivatives products traded on the Bourse de Montréal Inc.

Objectives

The objective of the product is to seek a return on the product depending on your view of future stock prices. The product achieves this by offering you the right to purchase a stock index composed of an underlying basket of stocks, as identified in the option contract (the "**underlying**") at a fixed price (subject to cash settlement as described below) at a specified date in the future.

To purchase an option you will pay the option premium at the time of purchase, and scaled by a factor to account for the index multiplier notation of the option (as specified in the option contract, being the "**Index Multiplier**").

For each option that you hold, you will have the right, but not the obligation, to exercise the option on the Expiry Date and purchase an amount of the underlying equal to the Strike Price and scaled by a factor to account for the index multiplier. For each option that you hold on the Expiry Date, the option is automatically exercised at the Strike Price and the option is cash settled which means that you do not actually purchase the underlying but that instead, in the event the Final Settlement Price of the underlying is greater than the Strike Price ("**in-the-money**") you will receive the difference between the two, scaled by a factor to account for the index multiplier. If the option is not in-the-money on the Expiry Date the product will not be exercised automatically and will expire worthless. You may close-out your position on any day prior to exercise at the market value of the option premium, in the manner described below in "How long should I hold it and can I take money out early?".

In the event of certain extraordinary circumstances, such as those resulting in the market ceasing to function correctly, the Product Manufacturer may terminate the product or make adjustments to the terms of the product.

"Expiry Date": the third Friday of the contract month as specified in the option contract.

"Final Settlement Price": the official opening level of the underlying (the designated S&P/TSX stock index) as published by Standard and Poor's at 9:00am (Montreal time) on the Expiry Date.

"Strike Price": the strike price of the underlying as specified in the option contract.

Intended Retail Investor

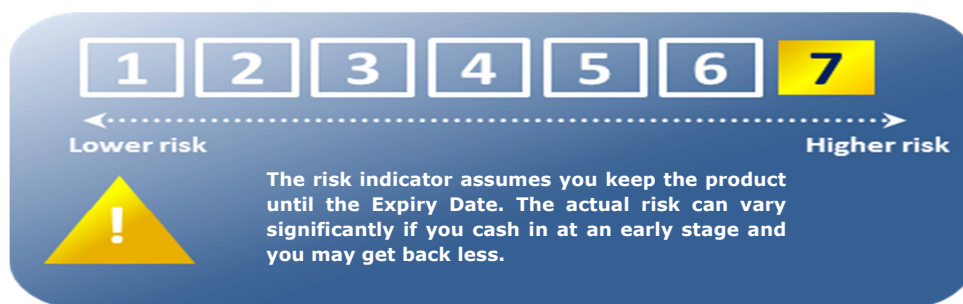

The product is intended to be offered to investors who:

- i) have an investment horizon up to the Expiry Date;
- ii) are able to bear a total loss of the amount invested;
- iii) have extensive knowledge of, and experience with, financial products and the financial markets generally;
- iv) are seeking a leveraged return profile; and
- v) if located in the EEA, are in a country for which English is an official language.

Key Information Document

What are the risks and what could I get in return?

Risk Indicator

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the market or because we are not able to pay you. We have classified this product as 7 out of 7, which is the highest risk class. This rates the potential losses from future performance at a very high level.

Be aware of currency risk. You will receive payments in a different currency, so the final return you will get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

This product does not include any protection from future market performance so you could lose some or all of your investment. If CDCC, your broker (or any other intermediary) is unable to pay you what is owed, you could lose your entire investment.

Performance Scenarios

This graph illustrates how your investment could perform. You can compare them with the pay-off graphs of other derivatives. The graph presented gives a range of possible outcomes and is not an exact indication of what you might get back. What you get will vary depending on how the underlying will develop. For each value of the underlying, the graph shows what the profit or loss of the product would be. The horizontal axis shows the various possible prices of the underlying value on the Expiry Date and the vertical axis shows the profit or loss.

Buying this product holds that you think the underlying price will increase.

The figures shown include all the costs of the product itself, but may not include all the costs that you pay to your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

What happens if The Montréal Exchange (MX) is unable to pay out?

All transactions that are submitted to CDCC are registered in the name of the clearing members. Upon acceptance of the transaction, novation occurs and the initial transaction is replaced by two different transactions between CDCC and each clearing member involved in the transaction. Each clearing member looks to CDCC for the performance of the obligations under a transaction and not to another clearing member. Each client of a clearing member looks solely to the clearing member for performance of the obligations and not to CDCC.

You are therefore exposed to a default of the clearing member with whom you deal: if such clearing member fails or is otherwise unable to pay its obligations under the product, you may not receive any amount owed to you under the product and any payment that you do receive may be delayed. The product is not covered by an investor compensation or guarantee scheme.

What are the costs?

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the performance of the product. The total costs take into account one-off, ongoing and incidental costs.

The amounts shown here are the cumulative costs of the product itself. They include potential early exit penalties. The figures assume you invest CAD\$ 15,000¹. The figures are estimates and may change in the future.

Costs over time

¹ For the purposes of the cost calculations, it is assumed that the option premium is CAD\$ 190 per option contract (based on a premium of CAD\$ 19 and an Index Multiplier of 10). A lower assumed option premium would result in higher cost values.

Key Information Document

The person selling you or advising you about this product may charge you other costs. If so, this person will provide you with information about these costs, and show you the impact that all costs will have on your investment over time.

Investment CAD\$ 15,000 Scenarios.	If you cash in at the end of the recommended holding period ²
Total costs	CAD\$ 76.74
Impact on return (RIY) per year	2.07%

Composition of costs

The table below shows:

- the impact each year of the different types of costs on the performance of the product at the end of the recommended holding period;
- the meaning of the different cost categories.

This table shows the impact on return per year			
One-off costs	Entry costs	1.03%	The impact of the costs you pay when entering your investment.
	Exit costs	1.03%	The impact of the costs of exiting your investment when it matures.
Ongoing costs	Portfolio transaction costs	N/A	The impact of the costs of us buying and selling underlying investments for the product.
	Other ongoing costs	0.01%	The impact of the costs that we take each year for managing your investments.

How long should I hold it and can I take money out early?

Recommended holding period: any period up to the Expiry Date

There is no minimum holding period and you may disinvest (i.e. close-out your position) at any time during trading hours of the platform on or before the last trading day for the product as stated in the option, by selling the offsetting option (being the option offered by the Product Manufacturer which has identical terms save for being the version designated 'seller' rather than 'buyer'). For this reason there is no single recommended holding period, and instead it includes the range of periods up to the Expiry Date of the product.

How can I complain?

Any complaints about the product or the conduct of the Product Manufacturer or the person advising on, or selling, the product may be submitted by visiting the website www.m-x.ca/accueil_contact_en.php, by writing to Legal Affairs, Bourse de Montréal Inc., Tour de la Bourse, P.O. Box 61, 800 Victoria Square, Montréal, Quebec, H4Z 1A9 or by emailing legal@tmx.com.

Other relevant information

Further information relating to the terms of the product may be found at:

https://www.m-x.ca/produits_indices_sxo_en.php

https://www.m-x.ca/produits_indices_sectoriels_options_en.php

² For the purposes of the cost calculations, a recommended holding period of 90 days has been assumed. A shorter assumed holding period would result in a higher RIY.
